

ABSTRACT OF THE DISCLOSURE

In a printing control apparatus that communicates with an image forming apparatus connected via a network, information used in order to enable utilization of the image forming apparatus is registered. This information indicates a printing-completion notification function possessed by the image forming apparatus. In response to registration of this information, setting information for setting the printing-completion notification destination of the printing-completion notification function to the printing control apparatus is generated in such a manner that notification of completion of printing can be received from the image forming apparatus. Here setting information, which is recognizable by the image forming apparatus, is generated in order to set the printing-completion notification destination to the printing control apparatus.
